COMPANY OVERVIEW

A ABOUT US

Established in 2010, M/S. Sai Engineering Works is a premier, high-precision engineering and manufacturing unit situated in the strategic industrial cluster of Pune, Maharashtra. The company specialises in high-volume, defect-free manufacturing of premium forging & machining components engineered to meet rigorous Tier-1 and OEM automotive parameters.

Operating with advanced toolings for multi-axis CNC turning and robust vertical machining (VMC), Sai Engineering Works delivers exact-tolerance components critical for automotive fluid dynamics, structural sub-assemblies, and high-stress powertrain applications. The plant layout is optimised to match the rigid vendor metrics requested by leading Tier-1 global manufacturers.

QUALITY SYSTEM COMPLIANCE

Structured operations rigorously managed under robust QMS metrics, with continuous validation tracking and calibration routines mapped to strict automotive parameters. Certified ISO 9001:2008 Quality Management System, certified by AITF.

KAN-BAN & JIT PIPELINES

Proven lean performance execution utilising functional KAN-BAN loops and Just-In-Time setup, fully deployed across long-term supply schedules with Norma Group India.

FINANCIAL TRACK RECORD

1 PERFORMANCE METRICS

Sai Engineering Works exhibits a steady year-on-year growth path, reaching a record annual turnover baseline of **8.5 Crores** for the 2025–26 fiscal frame. This upward trend highlights the company's steady capital capacity to absorb new major product lines, configure specialised tooling arrays, and deploy dedicated manufacturing cells for upcoming OEM programs.

- **Polyrub Extrusion Pvt. Ltd.**

MANUFACTURING SCOPE

3 COMPREHENSIVE PRODUCT RANGE

Sai Engineering Works manufactures high-durability fittings, heavy structural couplings, and precise hardware components engineered to operate reliably under intensive cyclic stress, mechanical loads, and extreme fluid pressures.

COMPONENT CATEGORY	PRODUCT DETAILS & TECHNICAL SPECIFICATIONS
Fluid & Pressure Systems	Hydraulic & Pneumatic Banjo Fittings (full operational configurations from 6mm up to 80mm outer diameter), specialised high-pressure End Fittings, heavy-duty T-Connectors, and standard DKO Fittings.
Structural Hardware Companions	High-tensile Engine Flanges, Heavy-Duty Industrial Clamps, Precision Metal Spacers, Rod Eyes, Link Pins, and specialised End Cap hardware blocks.
Mounting & Bracket Systems	Automotive Fuel Filter Mounting Brackets, Priming Pump Mountings, Fuel Line brackets, Heavy Duty Bearing Covers, and Reinforced Hood Hinges (LH/RH sets).
Control Linkages & Safety Blocks	Automotive Locking Clips, Tail Lamp Structural Mounting Brackets, and custom engineered Brake Lever Assemblies.

INTEGRATED DUAL CAPABILITY: RAW FORGING & PRECISION MACHINING

By combining on-site hot forging capabilities directly with secondary multi-axis CNC turn-mill execution, Sai Engineering Works manages grain-flow orientation throughout the raw structure. This guarantees exceptional structural resilience, eliminating internal stresses and material defects — a critical factor when anchoring companion hardware to heavy cast structures.

PLANT DISCIPLINE

4 TRACEABILITY & PRODUCTION ZONING

The plant layout operates under strict structural segregation to secure mistake-proof material flow lines, total heat traceability, and to stop material cross-contamination:

RAW MATERIAL GRADE QUARANTINE → MULTI-AXIS CNC TURNING LINES → CONVENTIONAL AUTOMAT CLUSTER → INDUCTION BRAZING STATION

FIRST-OFF & IN-PROCESS INSPECTION → CLIMATE-CONTROLLED METROLOGY CLEAN-LAB → FINISHED GOODS PACKING & DISPATCH

SHOP FLOOR CAPACITY

5 MACHINERY & INFRASTRUCTURE

The manufacturing shop floor houses an aggressive array of heavy turn-mill, automated cold bar feeding, and high-tonnage stamping presses, enabling swift scale-up for sudden large-volume production spikes.

SR.	MACHINE / ASSET LINE	TECHNICAL PROCESSING CAPACITY / ACCURACY RANGE	QTY.
1	**CNC Turning Centers**	Multi-axis precision turning centers holding 10-micron tolerance thresholds	14 Nos.
2	**Automat Processing Setup**	Automated raw bar feeding setup managing stock lines up to 42mm outer diameter	30 Nos.
3	**Heavy Automat Lines**	Heavy-duty bar feeding automated lines configured up to 60mm diameter	4 Nos.
4	**Mechanical Press Array**	Automotive stamping, blanking, and forming lines from 30 Tons to 250 Tons	6 Nos.
5	**Induction Brazing Unit**	High-frequency 10 KVT induction setup processing parts from 2mm up to 50mm	1 No.
6	**Precision Lathe Lines**	Conventional lathe lines utilised for sizing setups; features versatile 4-Feet bed size	20 Nos.
7	**Heavy Duty Drilling Blocks**	High-torque vertical processing blocks with drilling capacities up to 1 Inch	10 Nos.
8	**Medium Drilling Lines**	Dedicated processing stations handling drill configurations up to 0.75 Inch	10 Nos.
9	**Radial Drill Units**	Heavy structural boring and radial drill configurations up to 1 Inch capacity	2 Nos.
10	**Automated Bandsaw Cutting**	High-speed raw material sizing bandsaws managing bar stock up to 200mm diameter	2 Nos.
11	**VMC (Vertical Machining Centre)**	Vertical machining centre for close-tolerance face profiling and pocket milling	1 No.
12	**Industrial Power DG Set**	Heavy capacity 185 KVT diesel generator loop ensuring 100% plant uptime protection	1 No.

Plant Infrastructure Note: the factory incorporates an independent 600 sq. ft. modern administrative block and engineering design desk, with surrounding floor space preserved to construct customer-specific cellular manufacturing rows for upcoming production requirements.

FINAL INSPECTION FACILITY

6 METROLOGY LABORATORY

To comply with absolute automotive warranty rules, the final inspection facility operates in a strict temperature-monitored layout equipped with robust master verification instruments.

LINEAR, ANGLE & PROFILE METROLOGY INSTRUMENTS

SR.	EQUIPMENT	LEAST COUNT	OPERATIONAL RANGE / BASELINE	QTY.
1	Mitutoyo Profile Projector	Optical Verification	Model M200 Target Array	01 No.
2	Air Gauging Systems	0.001mm (1 Micron)	0.1mm Range Calibration (Unimet)	02 Nos.
3	Micro-Plunger Dial Gauge	1 Micron	1mm Total Span (Mitutoyo)	01 No.
4	Digital Height Gauges	0.02mm	0 to 300mm Scale (Mitutoyo)	02 Nos.
5	Outside Micrometers Cluster	0.01mm	0 to 25mm Processing Span (Mitutoyo)	03 Nos.
6	Dial Vernier Calipers	0.02mm	0 to 150mm Capacity (Mitutoyo)	05 Nos.
7	Precision Surface Plates	Metrology Grade	650 x 650mm Planar Standard (Luthra)	02 Nos.
8	Bore Dial Gauges Cluster	Standard LC	10 to 150mm Diameter Checking Range	01 No.
9	Standard Between Centres	Alignment Check	0 to 525mm Concentricity Baseline (Luthra)	02 Nos.
10	Industrial Impact Machine	Mechanical Strength	Hammer Knock Block 1/2″ Setup	01 No.

6 CALIBRATED GAUGES

CALIBRATED THREAD, PLUG & BOUNDARY GAUGES

SR.	GAUGE CLASSIFICATION & STANDARD TYPE	DIMENSIONAL / THREAD SPECTRUM	QTY.
11	Thread Ring Gauges (Metric Standard Type)	M5 x 0.8 up to M33 x 2	30 Nos.
12	Thread Ring Gauges (UNF Standard Type)	8mm to 32mm spectrum range	20 Nos.
13	Thread Ring Gauges (BSP Standard Type)	8mm to 25mm spectrum range	15 Nos.
14	Thread Ring Gauges (NPT Standard Type)	8mm to 25mm spectrum range	10 Nos.
15	Thread Plug Gauges (Metric Standard Type)	M5 x 0.8 up to M33 x 2	24 Nos.
16	Thread Plug Gauges (UNF Standard Type)	8mm to 34mm spectrum range	16 Nos.
17	Thread Plug Gauges (BSP Standard Type)	8mm to 20mm spectrum range	15 Nos.
18	Thread Plug Gauges (NPT Standard Type)	8mm to 15mm spectrum range	4 Nos.
19	Plain Dimension Plug Gauges (Drawing Custom)	3mm to 28mm explicit pass lines	50 Nos.
20	Plain Dimension Ring Gauges (Drawing Custom)	3mm to 28mm explicit pass lines	15 Nos.
21	Snap Gauges Block Array (Batch Inspection)	3mm to 44mm Go/No-Go limits	150 Nos.

CAPITAL EXPENDITURE PLAN

7 TECHNICAL SCALING ROADMAP

To match projected program off-takes for immediate precision machining within automotive component structures, Sai Engineering Works has formally budgeted capital expenditure loops for the following machinery onboarding in the 2026–27 framework:

ASSET PIPELINE	TARGET ALLOCATION	STRATEGIC TARGET OBJECTIVE
High-Speed VMC Units	02 New Production Lines	Configured for complex face profiling, close-tolerance vertical boring sequences, and precise pocket milling on cast components.
Special Purpose Machines (SPM)	02 New Production Lines	Dedicated automated SPMs for accelerated processing of multi-port fluid couplings and multi-angle custom Banjo units.

> “We are structurally prepared to co-invest, construct tailored jig work-holding setups, design custom robotic inspection fixtures, and deploy dedicated quality cells matching the Customer Specific Requirements (CSR) mandated by our OEM partners.”
